The CISA Booster Course:

*"Where **Theory** is put into **Practice**."*

Who? Being a *CISA* means you cover various socio-technical domains. You manage organization's internal or external Audit efficiently, effectively and aligned with business objectives or at least work together with the Audit Teams ... ***at least in theory.***

What? Indeed, these *outcomes* are hard to realize, when you are suddenly faced with a **real *project*.** Practical *problems* already arise at the very beginning of Audit Scope or Project Scope development. However, satisfactory *solutions* cannot be found in *CISA* theory nor are described in existing literature.

Why? The *project* success or failure is based on Senior Management Commitment same for a successful Audit and to get this is based on your *experience*, but we know, these are hard to get.
As we are aware of these issues, we can help you to advance.

How? We will put the *theory* into the *practice* on the example of a real life project – from project scope development till project Audit. A unique opportunity to learn (only this time, ***FREE OF CHARGE***):

- CISA Aligned Real-Life Case.
- Based on a real life project
- Complete: From Mandate Acquired to your part the Project Audit.
- Don't Reinvent the Wheel: Do's, Don'ts, Caveats and Pitfalls.
- Best Practices to Save Money and Time.
- Study Support for CISA Final Exam (aligned with CISM, CRISC & CGEIT).
