

Live from Innsbruck & Ljubljana

The CISM Booster Course:

> >>>>>>>>> “Where **Theory** is put into **Practice**.”

Who? Being a *CISM* means you cover various socio-technical domains. You manage organization’s information security efficiently, effectively and aligned with business objectives ...**at least in theory!**

What? Indeed, these *outcomes* are hard to realize, when you are suddenly faced with a **real project**. Practical *problems*¹ already arise at the very beginning of InfoSec program development. However, satisfactory *solutions* cannot be found in *CISM* theory nor are well-described in existing literature.

Why? The *project* success or failure is ultimately based on senior management *commitment* as well as on your own **experiences**. We know – these *experiences* are hard to get, and this is where we can help you to advance.

How? We are going to put the **theory** into the **practice** on the example of an identity management system² rollout case. A unique opportunity to learn (only this time, *****FREE OF CHARGE*****):

- >>>>> CISM Aligned Real-Life Case.
- >>>>> Based on Identity Management System Rollout.
- >>>>> Complete: From Mandate Acquired to Lessons Learned.
- >>>>> Don’t Reinvent the Wheel: Do’s, Don’ts, Caveats and Pitfalls.
- >>>>> Best Practices to Save Money and Time.
- >>>>> Study Support for CISM Final Exam (aligned with CISA, CRISC & CGEIT).
